

Building the office of the future with Cortana

GETTING STARTED WITH THE BOT FRAMEWORK

About Me

- ▶ Bill Crider
- ▶ Director: Microsoft Practice at Ascendum
- ▶ Cincinnati Ohio
- ▶ Email: Bill.Crider@Ascendum.com
- ▶ Twitter: @Bill_Crider_

State of voice/bot tech

- ▶ Estimated to grow to 82% of all mobile devices by 2020
- ▶ In your home, office and car already
- ▶ A new frontier in productivity

Natural uses in the Office 365 world of collaboration

- ▶ Replace search with guided bots and voice commands
- ▶ Personal assistants – calendar, appointments, tasks
- ▶ Connect with people in your organization
- ▶ Canned routines for predictable conversations

Setup Cortana on different devices

- ▶ Invoke Speaker
- ▶ Phone
- ▶ PC
- ▶ Connect calendars on all 3 devices
- ▶ Connect to iHeart and Spotify music services
- ▶ Can control basic commands on PC
- ▶ Voice recognition still 1B generation – fairly basic interactions

Demo – Cortana OOTB

- ▶ Settings – set up voice activation
- ▶ Manage what Cortana can access
- ▶ Search across devices
- ▶ Heads Up
- ▶ Invoke speaker
- ▶ Open Alexa

Developing Bots and Cortana apps

- ▶ Easiest way is to run as Azure service with Bot services providing the middleware
- ▶ C#, NodeJS platforms
- ▶ V4 release in November 2018 – major rewrite of platform
- ▶ <https://dev.botframework.com/>
- ▶ Lot of the documentation is out of date
- ▶ All the Cortana docs are V3 as of early December 2018

Setting up Azure Services

- ▶ Everything can be done for testing on FREE levels of service
- ▶ Be Careful – a lot of quick starts in the docs provision you a paid level of services
- ▶ DEMO – Set up App Services

Set Up App Service Plan

Search App Service Plan in all services on Azure Portal

Create a free tier – you will be able to choose this tier for your future services

Setting up your Dev Environments

- ▶ Visual Studio 2017 version 15.9 minimum
 - ▶ Online samples use .Net Core 2.1 – you will get errors with lower versions
- ▶ Visual Studio Code (or other dev tool)
- ▶ NodeJS

- ▶ Bot Emulator

<https://github.com/Microsoft/BotFramework-Emulator/releases/tag/v4.1.0>

Setting up your Dev Environments

▶ GitHub Samples

<https://github.com/Microsoft/BotBuilder-Samples>

VS 2017 Bot Template

<https://botbuilder.myget.org/feed/aitemplates/package/vsix/BotBuilderV4.fbe0fc50-a6f1-4500-82a2-189314b7bea2>

CLI Tool

<https://docs.microsoft.com/en-us/cli/azure/install-azure-cli-windows?view=azure-cli-latest>

Demo – Setting up a Bot from Azure

- ▶ This is the easiest way to get started – everything is set up for you
- ▶ Go to Azure Portal , select BOT Services – AI + machine learning section
- ▶ Add “ web app bot” , Click create
- ▶ Fill out the form
 - ▶ Select the Free pricing tier you created earlier if you don't want to pay
 - ▶ Doesn't seem to matter which template you pick, they are the same codebase
 - ▶ Select V4 and language preference
 - ▶ Enterprise BOT – requires separate signup and approval
 - ▶ Application insights gives you some usage data

Demo - Set up a Bot from Visual Studio

- ▶ <https://docs.microsoft.com/en-us/azure/bot-service/bot-builder-howto-deploy-azure?view=azure-bot-service-4.0&tabs=csbotvs>
- ▶ Build some code in Visual Studio (or start with samples)
- ▶ Right click solution – Publish
- ▶ Bot Registration

Demo - Add a Cortana channel

- ▶ Go to Bot Services and select a BOT
- ▶ Under Bot management, select Channels
- ▶ Add the Cortana channels
- ▶ Test the Bot in web chat or the Emulator

Set up LUIS Service

- ▶ Used for accessing the natural language processing service
- ▶ <https://www.luis.ai/applications>
- ▶ Apps set up automatically for Bot created from Azure portal
- ▶ Intents are a course of action that you can provide logic for
 - ▶ Intents are trained from presumed utterance patterns
- ▶ Entities are keywords from utterances

Set up QnA Service

- ▶ <https://www.qnamaker.ai/>
- ▶ Create question and answer pairs
- ▶ A set of questions and answers is a “ knowledge base”

Lets look at some code

- ▶ Echo Bot
- ▶ Adaptive Card
- ▶ Cortana Card
- ▶ Debugging online
- ▶ Debugging locally
